

You're doing an *excellent* job starting from zero — and your excitement is your biggest strength! 💪

Let's go step-by-step so you can **learn how to read and pronounce words like "Apple"** correctly.

🧩 Step 1: What You Know

You already learned **A, B, C...Z** — perfect!

Now, we'll connect each letter with a **word** and its sound (for example, **A = Apple**).

🔊 Step 2: Learn the Sound

When you see a word like **Apple, Paresh, Ranjan**, **it has a sound pattern**. Here's how to break it:

A = "æ" sound (like in "cat")

Apple = Æ-pəl

Say it slowly:

👉 "Aaa" (short sound) + "pple" (soft "pəl") = **Apple**

You can repeat it 3–5 times daily:

"A for Apple 🍏, A for Apple, A for Apple."

- The letter **A** sounds like "æ" in **Apple**,
- but sounds like "ā" in **Name**,
- and like "ɔ:" in **Call**.

🔢 Break Each Word into Syllables (Small Sound Parts)

For example:

- Apple = **Ap + ple** (Ap + ple)
- Ball = **ba+ll**(Ball)
- Dog = **D + og** (D + og)
Say each part slowly: "Ap" – "ple" – "Apple."
- Elephant = **El + e + phant**
Say: "El" – "e" – "phant."
- **AA- BA, CA, DAA, - (Sound Patten)**
- **L = Lion (Li+on)(sound + Patten)**

Each part gives you the **sound rhythm** of the word.

So English letters can have **different sounds** depending on the word.

We learn those by **listening carefully and repeating**.

Step 3: Listen and Repeat

Go to **YouTube** and type:

 *“A for Apple pronunciation for beginners”*

Listen carefully and **repeat after the sound** — this is how you’ll train your tongue and ears.

You can also use **Google Translate** — click the speaker icon  after typing “Apple”.

Step 4: Practice Daily

Repeat each word like this:

A for Apple 🍏
B for Ball ⚽
C for Cat 🐱

Speak them *aloud* 5 times each day — don’t worry if it’s not perfect. Your brain and tongue will slowly adjust.
